Design and Evaluation report

- Introduction

This assignment purpose is to test the programming, design and critical thinking skills that have developed during the term. To get done the work, a range of research was undertaken, such as, how to get inspiration for the sketch, how to use the correct JavaScript code. Drawing sketch on paper or on device also important for finish the project, as it is a quick way to record ideas, memories, and observations. However, drawing on paper not the only way to make the sketch before start coding. Picsart, an app used to edit image or create image also used for drawing the sketch. A short summary of how to get done the work, firstly, do research and get inspiration, then draw a sketch, finally turn it to code.

- Research

The creative process doesn't exist in a vacuum and it's a highly integrated activity defined by Greenberg (2007), this gave me idea of not only get inspiration from artist, is also can get from other ways, such as interests and everyday objects. Harris and Pabst (2023) identified that optical arts are like like magic tricks of the art world and give readers feeling of confusion also disagreement between eyes and brains. *The Complete Book of Drawing Optical Illusions, 3d Illustrations, and Spiral Art* introduces how to get start of creating optical art, this made me feel interested to optical art. *Getting Started with p5.js* contains all the useful JavaScript code, which is friendly to people who first time to learn JavaScript code, when creating the sketches, this book also helped me a lot.

- sketches

(sketch 3)

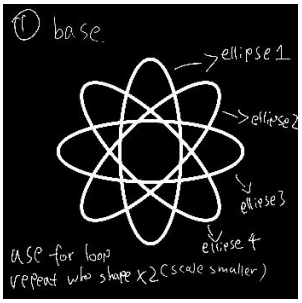
(sketch 1 and 3 drew with ibisPaint X on device)

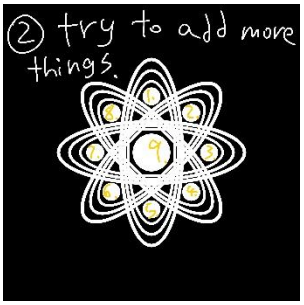
- # Details of designing 3 sketches

Sketch 1 focuses on repetition, making a simple sketch and arrange itself, arrangement include change colour and repeating whole sketch how many times. Getting start with the code, square 1 in white colour and repeated for 20 times with each scale decrease 0.005 and rotated 15 degrees for each scale. Secondly, square 2 same with square 1 but colour changed to pink and rotated 30 degrees for each scale. Lastly, square 3 also same with above actions, but it's colour in blue and rotated 60 degrees for each scale.

Sketch 2 focuses on contrast which shown in colour by using black and white. In addition, repetition also applied in the sketch. Firstly, by draw 4 ellipse each rotated same degrees, then using for loop to repeat whole thing 2 times and each scale getting smaller. Secondly, add more filled ellipse inside (refers to image 2), ellipse 9 is the largest one and is placed in the centre of the canvas, ellipses 1 and 5 share same x position but opposite y position, ellipses 2 and 8 same y position but opposite x position, ellipses 3 and 7 same y position but opposite x position, ellipses 4 and 6 same y position but opposite x position. Lastly repeat step 1 but much more smaller and stroke in black.



(figure 1a)



(figure 1b)

(figure 1c)

Sketch 3 focuses on random and repetition. The size of ellipse and transparency are random, interactivity added to the sketches, by pressing the mouse whole sketch will stop the loop which make the animation stop.

- # Inspirations

Honestly, for the base of sketch 1 and sketch 3 inspirations were gotten from week 8 workshops as image 2. However, the inspirations for both sketches' arrangement are from different games. For the colour in sketch 1, inspiration came from a music jacket as image1 (Sekai viewer, 2020). For sketch 2, inspiration came from a rhythm game which about DJ, and knew from the game, there's a position called VJ which is a job following the music and play suitable animation, based on this idea, sketch 3 is following an image of song that gave to me. Finally for sketch 3, inspiration from an app which called Picsart, by using the stroke and shape provided as image 3 and 4, then group them together to create a new sketch.

- # Evaluation

Sketch 1 focused on repetition, used the idea of task 1 in week 8 workshop, and added two more set with rotated in different degree of angle also changed to another colour. Overall, the sketch visual is same with what I want, therefore is successful. However, using the square for the base is too simple, to make improvement, maybe can change the shape to another polygon, such as triangle.

Sketch 2 focused on contrast, contrast various elements of the piece to draw a reader's eye into the page, by using this concept learnt from graphic and web design studio, sketch 2 only used black and white to show the contrast. The repetition shown in ellipse is successful, before input the code, simple calculation did. Improvement of sketch 2 could be made by adding more elements to the canvas, because now it looks too empty for this sketch.

Sketch 3 focused on randomisation, transparency and size of ellipse are generated randomly. The use of randomisation is successful. However, if I have more time, I will try to change its frame rate to make it look much smoother.

Overall, the project is successful. However, to do better in future, more research should be undertaken since almost all sketches' inspiration was came from workshop.
